Avitech's Rainier Series of Multiviewers Wins "Best Video / Broadcast Product" At InfoComm 2007

July 27, 2007 - Redmond, Washington, USA – Avitech International Corporation, a leader in multi-image display processors announced today that their Rainier Series of Multiviewers was honoured with an award from Rental & Staging Magazine in the category of "Best Video / Broadcast or Video / Streaming" product.

The award, which focuses on new rental and staging technologies, was presented during InfoComm's annual AV Awards Ceremony on June 19, 2007 at the Anaheim Convention Center in Anaheim, California, USA.

The new Rainier Series of multiviewers is an extremely cost-effective line of multi-image display processors that addresses entry-level broadcast and professional AV (ProAV) applications. Its small form factor makes it ideal for space-deficient applications. Since the Avitech modules are only 10 inches deep, they take up "zero rack space", which means they can be mounted on the back of rackmounts, offering a completely unique solution for space-saving applications.

"We are honored to have been recognized by our industry peers, and to receive such a prestigious award," states Morris Gong, Avitech President. "The ProAV industry is growing at a rapid pace, and one of our key goals as a company is to continuously utilize new technology to bring to market solutions that enable our customers to easily, and affordably visually monitor their audio and video sources."

About Avitech International

Avitech is an industry leader and technology provider of multi-source video display processors. Avitech offers the most extensive and flexible multi-source virtual monitor walls and presentation modules, enabling operations of any size to truly achieve media monitoring and presentation. With the focus on *raising the visual standard with Quality, Scalability and Redundancy*, Avitech provides solutions for the Broadcast, Security & Surveillance, and Professional AV Markets.
