Avitech Commits To RoHS Compliance

April 16, 2007 - Redmond, Washington, USA – Avitech International Corporation, a leader in multi-image display processors announced today that their full line of multiviewers is RoHS compliant to abide by European standards for lead-free equipment.

The RoHS European directive has been in force since July, 2006 and bans the use of certain hazardous substances in new electrical and electronic equipment. The directive aims at promoting lead-free components in the complete production process for the sake of being environmentally friendly.

All Avitech's product shipments to the European Unit are RoHS compliant and they made their first RoHS compliant product sales into Europe in July, 2006.

"We have been working vigorously with our supply chain to convert our entire product range to comply with all RoHS requirements," states Morris Gong, Avitech President. "As a provider to various segments of the audio and video industry, we are a global company committed to supporting the ecological system. As such, we understand that certain electrical products may adversely affect our environment after disposal, thus our commitment to the RoHS directives," continues Morris. "We also try to keep in mind that RoHS compliance is far more than just 'free from lead,' but rather the way we design our products, buy products and conduct business globally."

Avitech's current products, the MCC-8004, VCC-8000, ACC-8000, and the new Rainier series, which is being introduced at NAB2007 Booth #SU13215, are all RoHS compliant.

About Avitech International

Avitech is an industry leader and technology provider of multi-source video display processors. Avitech offers the most extensive and flexible multi-source virtual monitor walls and presentation modules, enabling operations of any size to truly achieve media monitoring and presentation. With the focus on *raising the visual standard with Quality, Scalability and Redundancy*, Avitech provides solutions for the Broadcast, Security & Surveillance, and Professional AV Markets.
