

Application Note: Sports Bar / Restaurant AV Control

CHALLENGE

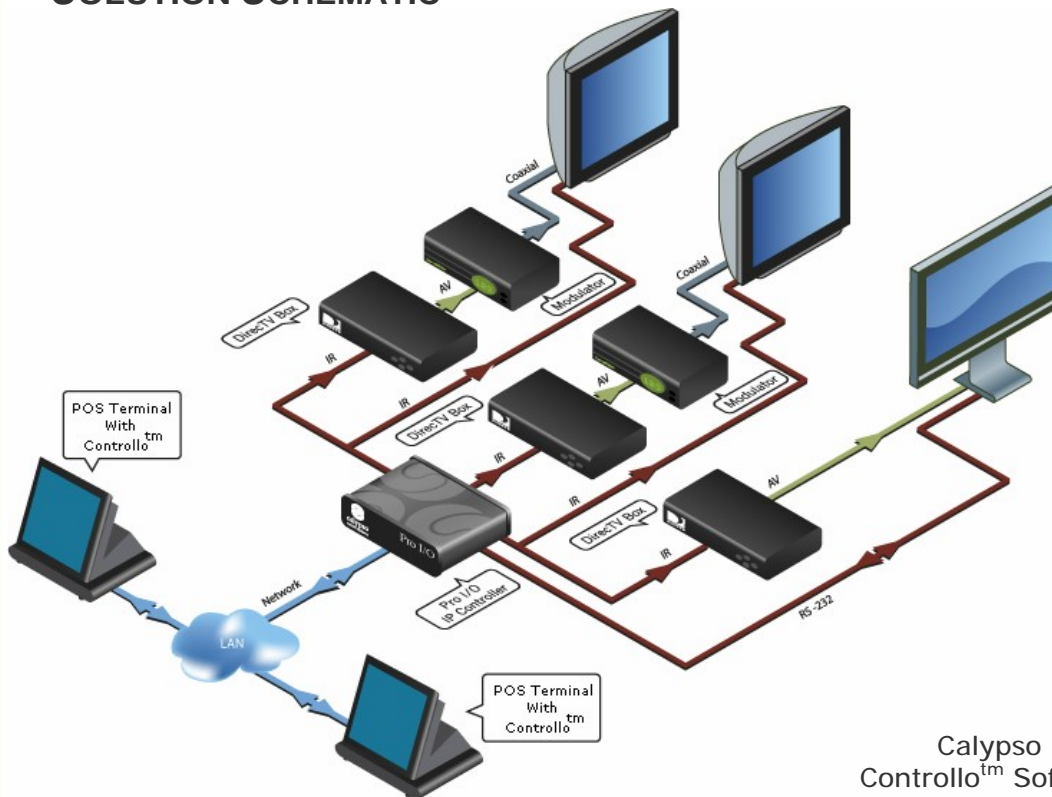

- Bring intuitive and reliable device control to AV gear found in restaurants and sports bars
- Insure that AV device control is restricted to solely to authorized personnel
- Provide multiple control access locations, conveniently located through the establishment
- Minimize end-user training
- Minimize cost per access point

SOLUTION – INTEGRATED POS MEDIA CONTROL MODULE

When combined with Calypso IP-based device controllers, **Controllo™** software, from Lone Tree Technology (www.lonetreetechnology.com), delivers full control of televisions, satellite and cable TV boxes, modulators, amplifiers, AV Switches and other audio-video devices directly through standard POS terminals. The combined Calypso / Lone Tree solution is compatible with all leading, Windows-based hospitality POS solutions, including those from Aloha, Micros and Maitre'D, taking advantage of graphical interfaces, touch screens, and POS network, backup and security features. When implemented, an AV Control option appears as a graphical button on the standard POS screen. With proper POS security access, the button reveals a full range of intuitive, graphical controls useful for changing channels, adjusting volume, turning devices on and off and more.

Controllo is compatible with Calypso Pro I/O and ION Series controllers, and can be scaled to manage any number of IR, Serial or Networked devices, including iTunes running on a networked PC, through any number of POS terminals. Moreover, the solution accomodates scheduled events, based upon day and time, as well as remote, secure browser access.
