Calypso Introduces Innovative Wall-Mount Control

CW-1000 Combines Flexibility and Style With Low-Cost

10 April 2006 – Hudson, WI. Calypso Control Systems has introduced the CW-1000 wall-mount control panel as an extension of its line of AV control products. Designed to fit into a standard single-gang box, the CW-1000 applies a familiar user interface to AV control, bringing simplicity, style and reliability to a broad range of small-room control applications. The CW-1000 can be used as a stand-alone controller with single or dual (optional) IR outputs, or can be integrated with Calypso Pro I/O or ION controllers for added relay, serial and network-based control.

Offering unprecedented flexibility, the CW-1000 is field-configurable to operate in “Wheel” mode, ideally suited for gradient control of volume and lighting, or “Button” mode, with 2 to 8 discrete, programmable buttons. Device setup is accomplished through an on-board serial programming port, and includes features such as built-in IR learning, automated cloning, audible button clicks (selectable) and rotating commands. To further ease installation, Calypso includes the CW-TB, a small terminal block capable of sending Power and receiving and distributing IR signals from up to 2 CW-1000 units over a single CAT-5 cable.

“As with other Calypso products, the CW-1000 will change the way both dealers and end-users think about device control”, noted David Parish, President of Calypso Control Systems. “As control become relevant to a more diverse customer base, it’s important we continue to innovate and to not get trapped in re-hashing the same ideas. The CW-1000 is a great example of our drive to innovate, while delivering real value to our dealers and end-users.”

About Calypso Control Systems

Founded in 1999 Calypso Control Systems delivers innovative control and monitoring hardware and software solutions for professional AV applications. Calypso products such as Pro I/O and ION controllers simplify and speed the creation of control solutions by introducing an integrated event database and through patent-pending c_Link, which integrates control interfaces directly into PowerPoint and Word and on Windows, Macintosh and Linux desktops. Calypso products are sold exclusively through AV industry dealers and system integrators worldwide. www.calypsocontrol.com
