

Morph-It Dual Transmitter Card

Morph-It with Dual
Transmitter Card
with Local Monitor Out

Designed for use in Magenta Research's Morph-It™ rack-based Cat5 distribution platform, Dual MultiView™ Transmitter Cards are available for a variety of signal distribution applications. Sixteen single-slot cards can fit in one Morph-It frame, providing 32 transmitters in 4U of rack space. Power is drawn from Morph-It's backplane, eliminating the need (and cost) of multiple power supplies. Alternatively, a single Morph-It frame can accommodate eight double-slot cards (16 transmitters), which may be used when local monitor outputs, full duplex RS-232 or -SA options are required.

Morph-It Transmitter Cards are available in four configurations:

- Dual MultiView Transmitter Card: Single-slot card to transmit high-resolution video plus L/R summed audio OR simplex serial signals. (shown above)
- Morph-It Dual MultiView Transmitter Card with Local Monitor Out: Double-slot card to transmit high-resolution video plus L/R summed audio OR simplex serial signals. (shown above)
- Dual MultiView Transmitter Card with Local Monitor Out and Full-Duplex RS-232: Double-slot card.
- Dual MultiView -SA Transmitter Card with Local Monitor Out: Double-slot card to transmit high-resolution video **PLUS** stereo audio **PLUS** full-duplex RS-232.
