

MultiView Series in Airport Applications

Fulfilling the specific requirements of airport A/V applications, Magenta Research offers the MultiView Series of receivers, transmitters and full-matrix switches. MultiView provides flexible, adaptive and cost-effective solutions to a wide variety of airport installations and layouts.

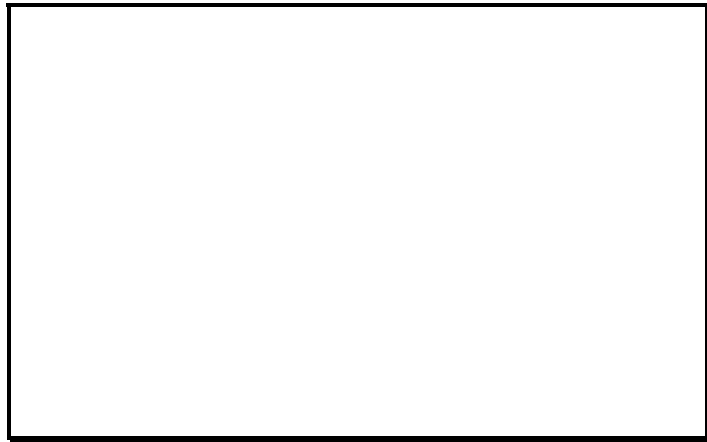

Miami Airport

Benefits - MultiView for Airport A/V

- Delivers and distributes high-resolution video (including UXGA) to 1500 feet (457m) over CAT5-type cable
- Directly replaces fiber optics at a fraction of the cost
- Minimizes number of source computers and cable volume
- Adapts to any requirement set and footprint

MultiView Series airport installations include:

- Orlando
- Miami
- Richmond
- Minneapolis
- JFK
- LaGuardia
- Sacramento
- Manchester

Magenta Research is the demonstrated leader in the delivery and flexible distribution of audio/visual signals. In June 2003 Magenta accomplished an industry first - the transmission and maintenance of high-resolution UXGA video at a distance of 1500 feet (457m) over cost-effective CAT5 cable. The company's products address dynamic signage and Pro A/V applications in retail, fast food, airport, theater, casino, courtroom, worship, museum, call center and trading floor environments.
