Calypso Introduces ION-LT and -LT2 Control Dongles

Small, Full Featured Controllers Attach Anywhere

22 February 2006 – Hudson, WI. Calypso Control Systems has announced the introduction of the ION-LT and –LT2 control dongles, designed to bring full-featured control and monitoring to small room projects quickly, easily and inexpensively. Despite their remarkably small size, both ION-LT models offer the complete Calypso feature set, including on-board web server and event database with 512 “actions”, control hyperlink compatibility, timed events, network events, IR learning and more. Available with one (ION-LT) or two (ION-LT2) RS-232 ports, both models also provide Ethernet connectivity, dual IR outputs and a single relay.

“Whether it’s a classroom, boardroom or other small room, the ION-LT and –LT2 are designed and priced to bring control and monitoring to nearly any project”, notes David Parish, President of Calypso. “Of course, this is not just about a small box, but about eliminating control logic code-writing and about bringing control directly into the programs our customers are already using, like PowerPoint and Windows Desktop icons, while continuing to support more traditional button and graphical control interfaces.”

About Calypso Control Systems

Founded in 1999 Calypso Control Systems delivers innovative control and monitoring hardware and software solutions for professional AV applications. Calypso products such as Pro I/O and ION controllers simplify and speed the creation of control solutions by introducing an on-board event database and through patent-pending c_Link, which integrates control interfaces directly into PowerPoint and Word and on Windows, Macintosh and Linux desktops. Calypso products are sold exclusively through AV industry dealers and system integrators worldwide. Visit www.calypsocontrol.com for additional information.
