

## The Tricked Out Classroom

Tricked out? Loaded. State-of-the-art. All the bells and whistles. A term usually reserved for cars dripping with chrome and custom paint jobs has crossed over into our world. Regardless of how you say it though, classrooms are moving in this direction fast and furious. Budgets are opening up, teachers are developing new skills and students reap the benefits. A classroom full of multimedia gear doesn't do much good, though, if the user interface and remote monitoring is awkward or inconvenient. The problem - until now - has been that flexible, integrated control has been time-consuming, complex and expensive.

The ION-LT from Calypso provides the basis for controlling and monitoring nearly anything found in a standard classroom. It offers the basics (1 or 2 RS-232, dual IR output, Ethernet and a relay), the practical (on-board event database and web server eliminates control logic code-writing, making projects faster and solutions more reliable) and the unbelievably useful, not-found-anywhere-else (Windows desktop control icons and PowerPoint buttons as user interface options). The LT is the most useful control dongle in the industry, designed to connect directly to a projector suspended from the ceiling. Remarkably easy to configure, install and support, the ION-LT changes how dealers create control solutions and how customers use them. And like all Calypso controllers, it carries a lifetime warranty.

Check out IDT's web site or call IDT for more info and to talk with IDT's sales representative about your projects. We look forward hearing from you.

David H. Parish  
Calypso President
