IDT's J-Plate.

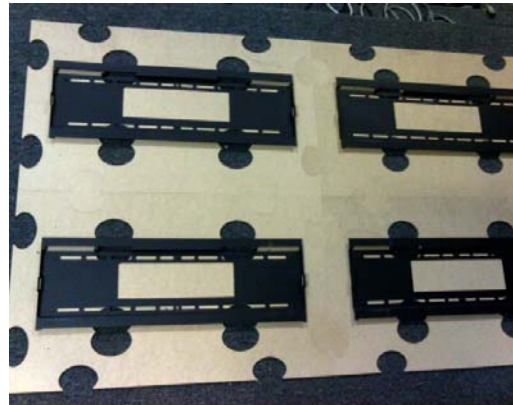

The alignment solution for Samsung's near seamless LCD panels (400UX, 460UX)

Till now it has been costly, time consuming and difficult to precisely align more than one LCD screen to create a near seamless 'Banner', 'Poster' or 'Videowall'

IDT's J-Plates are used to easily and accurately position each LCD screens mounting bracket to ensure that when the LCD's are fitted they are correctly aligned and spaced as intended.

J-Plates can be used for odd or even shaped display walls (1x3, 2x4, 5x2 etc.) and the unique "key" pieces ensure the J-Plates are correctly spaced every time. The design of the J-Plates also caters for LCD screens to be mounted flush with adjoining walls, ceilings or cabinetry.

As easy as 1,2 3.

- 1) Position and Clip the J-Plates into the displays designated position
- 2) Mark or drill through the J-Plate's pre-drilled mounting bracket attachment points
- 3) Fix the wall mount brackets through the J-Plates using suitable mounting hardware for the surface behind.

J-Plates must be used with either IDT's BWZ mounting bracket (flat low profile non tilting)
