

KLM GROUP, ACT

Australian Federal Police – Edmund Barton Building

KLM's ACT branch performed extensive work on the high-security (and hence highly un-photographed) AFP building, including within the Operations Control Centre. The fitout includes three 16-panel video walls, multiple LCD displays, XPanel Crestron control, a Magenta Mondo 128 x 128 video matrix and Media Matrix digital audio. The publicly-accessible component of the project encompasses a state-of-the-art Media Theatre, where KLM designed, supplied and installed acoustic treatment, retractable seating, a digital green screen wall, two edit suites, voice over booth, three broadcast cameras, Crestron DM switching with Crestron control, automated bio box infrastructure, and LED broadcast lighting.

More information: AV will have a detailed feature on the Edmund Barton building in a future issue.
